

Wyse Extends Leadership with Advanced Virtualization Solutions Around Windows 7

Wyse announced today Day One support for Windows 7. This level of support allows users of Windows 7 to immediately deploy Wyse virtual desktops while using this new OS.

Only Wyse is taking the Windows 7 experience to the next level in so many ways!

Virtualize it! with lower TCO, and better security
Supported by Wyse Virtualization Software, TCX, for immediate use in virtual machines

- VMware - Wyse RDP and PCoIP clients deliver VMware View support and rich Windows 7 experience
- Citrix - [Wyse Viance](#) desktop appliance as well as the whole Wyse thin client line, supports Windows 7 in Citrix XenDesktop environments
- Microsoft - Wyse thin clients based on Windows XP Embedded® and Windows Embedded Standard® deliver the richest Windows 7 experience available to date

Stream It!

Wyse WSM already powers Zero Clients and legacy desktops to become fully fledged diskless computers running Microsoft Windows XP Pro or Vista. Now that support is extended to Windows 7 for streaming to a virtual machine, thin client or PC.

Globalize it!

Save today on our most popular desktop and mobile thin clients with Instant Rebates, Software Bundles, and Amazing Offers for Education.

Wyse VMworld Winners Announced!

Congratulations to all of our lucky winners at VMworld!

Now validated on Windows 7, Wyse Virtual Desktop Accelerator (VDA) software accelerates Microsoft RDP and Citrix ICA protocols by up to 3-20 times on networks subject to latency and packet loss.

Place it in the Cloud!

Any Windows 7 cloud-based application that is accessed from a virtual desktop is immediately accessible via Wyse thin clients.

Hold it in your hand!

Wyse's innovative PocketCloud app, which delivers complete access to a PC or virtual machine from an iPhone or iPod touch, will immediately support desktop access for clients running Windows 7.

For more information please read our [press release](#) and [product page](#).

Watch Brian Madden confess his mini-crush on Wyse!!

Check out Brian Madden TV!

This is Brian's third VMworld 2009 wrap-up show and showcases Wyse client virtualization. Brian talks about his mini-crush on Wyse and how impressed he is with the solutions we had at VMworld, including:

- New [Wyse C class](#) client devices (small, cheap things with dedicated media processors for processing video locally)
- New [Wyse P class](#) client devices with PC-over-IP hardware chips built in (We did a whole BMTV show on that last week)
- [Wyse WSM](#), an Ardence derivative for streaming Windows to super thin clients
- Wyse Project "Borg," software for turning old PCs into thin clients
- [Wyse PocketCloud](#), an iPhone RDP & VMware View client
